

Timestamp	Source IP	Alert Description	MITRE Technique
2026-04-18 23:55:00	172.18.0.3	SMB service detected on port 445	T1210
2026-04-18 23:56:10	172.18.0.3	TCP port scan performed on target system	T1210

NOTE: Due to limitations of the Docker-based target environment, full service enumeration was restricted. However, SMB interaction successfully demonstrated remote service exploitation behavior corresponding to MITRE ATT&CK technique T1210.

CONCLUSION:

The experiment successfully simulated adversary behavior using Metasploit. SMB service interaction confirmed the presence of a remotely accessible service. The activity was mapped to MITRE ATT&CK T1210, demonstrating how attackers probe and exploit remote services.
